

Industrial Technology Safety Training

Concept

- Make students aware of workplace safety at the earliest age possible
- Applicable to wood, metal, and automotive shops
- Junior high, high school, and community college level
- Conducted in the classroom
- Approx. 45 minute presentations
- Interactive hands on training format versus lecture
- Train all students that a teacher instructs during a school day

Topics

- Safe work practices applicable to wood, metal, and automotive shop classes
- General information about State Workers' Safety programs & services
- Machine guarding
- Electrical safety
- Personal protective equipment
- Tools and equipment requirements
- Who is responsible for safety

Desired Outcomes

- Increase student knowledge and awareness of workplace safety
- Reinforce/increase shop teacher safety knowledge and awareness
- Better prepare students to work safely in the shop class
- Better prepare students to work safely when they enter the job market

This training has been positively received by the business community.
